B2B Cloud EDI Solutions: OpenEDI™

Cloud EDI managed solutions offer competitive advantage by enabling efficient and cost-effective digital services. Cloud EDI can replace on premise solutions, maximising current IT investments, whilst not requiring further hardware expense.

OpenEDI™ from Transalis is a secure, scalable, high performance SaaS application platform, hosted securely in the Transalis cloud. With OpenEDI your EDI transactions can be accessed 24/7 on multiple devices, wherever you have an internet connection.

From the smallest supplier, to the largest manufacturer and retailer, OpenEDI is a leader in Cloud EDI. Following global EDI standards including Tradacoms, EDIFACT, EANCOM and ANSIX12, Transalis and OpenEDI are accredited by GS1 for the complete EDI order-to-cash process.

It does not matter what size your business is, there is a Cloud EDI Managed Solution to meet your needs. Whether you are new to EDI and require a simple method for sending and receiving orders or an integrated EDI solution, OpenEDI is scalable to meet the needs of a growing business.

OpenEDI empowers users to automate business processes, remove manual processing and free up much needed resource.

“

Transalis has incorporated many years' experience of this industry, coupled with its technical expertise, to develop an exceptional Cloud EDI solution that is streets ahead of anything else in the marketplace today.

Both Web & Integrated EDI can have significant benefits for your business processes and your bottom line.

Traditionally, Web EDI is the first and most cost effective step into EDI for many customers. Integrated EDI is more prevalent when order volumes are higher, as businesses need to reduce the time and resource utilised rekeying heavy data loads.

By taking time to understand your business and how you operate, Transalis can tailor a flexible, futureproof solution that can evolve and develop in tandem with your trading relationships.

Benefits Of EDI:

Streamline Business Processes:

EDI enables real-time visibility into the supply chain, resulting in faster decision making.

Increase Speed Of Transaction:

EDI provides significant increases in the speed that documents are transferred from one company to another, reducing lead times and speeding up payments.

Reduces Costs:

EDI costs up to 70 times less than its paper-based equivalent. Paper-based trading processes are costly, inefficient and not sustainable. Automating paper-based tasks frees staff to concentrate on higher-value tasks.

Improve Data Accuracy:

Electronic transfer of trading documents between computers improves data accuracy through the removal of manual errors.

Current Users Include:

Why OpenEDI™?

- ✓ Cloud Based Software
- ✓ No IT Resource Required
- ✓ Scalable For Any Size Business
- ✓ Customisable Web Portal
- ✓ ERP Integration
- ✓ Dashboard Reporting
- ✓ Any2Any Message Formats
